ALLpaQ LOAD CELL DOLLIES

ALLpaQ Dollies are the perfect way to safely move bioprocess containers around your site or cleanroom, without lifting, carrying, tipping or damaging them.

ALLpaQ

STELLAR BENEFITS

Available in both stainless steel and durable plastic, ALLpaQ's wheeled Dollies help make your use of bioprocess containers more convenient and more flexible.

They're the easiest way to move bioprocess containers around your site, around your cleanroom or from one cleanroom to another.

Here at ALLpaQ we can put castors on our bespoke totes if you need them. But, if space is a premium, containers with castors cannot be easily stacked.

Our Dollies ensure that your containers can be stacked, either full or empty and they can still be moved safely and easily from one location to another.

ALLpaQ Dollies suit the entire range of standard and bespoke units we manufacture.

Once emptied, the totes can be collapsed and stacked on our Dollies, for extra convenience.

ALLpaQ

LOAD CELL DOLLIES

Precise measurement is crucial when you are filling and discharging containers.

Load cells are certainly heavy hitters when it comes to precise weight measurement. They are the heavyweight champion measuring instruments used throughout industry.

And those load cells are doubly useful when built into our Dollies.

ALLpaQ Load Cell Dollies offer portable precision and protection when transporting your valuable liquids around your cleanrooms or storage facilities.

They provide the precision of Swiss engineering with the Mettler-Toledo terminals, junction boxes and load cells.

The terminal / handle offers 360° swivel and 45° tilt for your convenience.

They also come complete with bolt-on plastic container alignment pegs, so they can be customised to safely accommodate the dimensions of your containers.

MANUAL HANDLING ACCESSORIES

ALLpaQ's wheeled Dollies help ensure that you can get the products you need where you need them. Both in-transit and in the laboratory. ALLpaQ Dollies can have handles attached to aid manual movement around the warehouse and around the lab.

With that in mind, it's essential that your bioprocess containers can be moved by your staff with the greatest of ease, in accordance with health and safety practices.

We like to think ALLpaQ Manual Handling Accessories help it seem like you're moving your bioprocess containers in zero gravity!

After all, if you're buying the best bespoke bioprocess containers, you need the best and most versatile Dollies to go with them.

Electric Tugs

Our Dollies are compatible with Master Movers or similar electric tugs. An electric tug bracket can be fitted to all models, so you can move them around more easily.

Manual Handles

Dollies can have handles attached to aid manual movement. This is typically something we offer for our heavier Stainless Steel models, but if you need handles for your bespoke plastic Dollies, just let us know.

UV Printing

Unique serial numbers and full colour company logos can be printed on plastic Dollies, to aid in tracking and loss prevention for shipping units. UV print ink is scratch-resistant and hard-wearing to avoid tampering.

ALLpaQ

WHY ALLpaQ

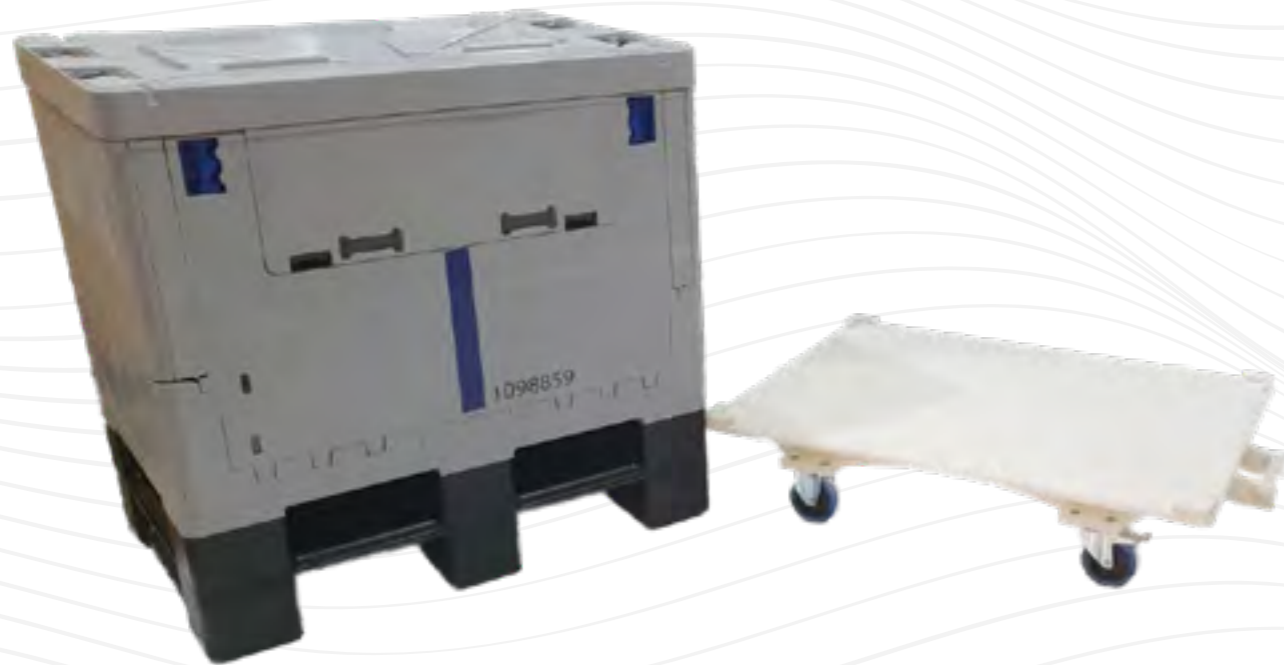

ALLpaQ really is your one stop shop.

You trust us to provide you with your totes and accessories, so it makes sense to get the Dollies which you know are guaranteed to be compatible and work safely with them.

One phone call, one supplier, one guarantee of high quality.

TOT(E)ALLY TERRIFIC TOLERANCES

We design our Dollies with additional strength tolerance built in - so our castors are rated higher than needed. This offers additional safety and peace of mind to our customers.

THE CUSTOM(ISATION) IS ALWAYS RIGHT

Customisation is offered as standard at ALLpaQ. Our Dollies are no different. And that's our difference!

Stainless Steel Customisation

All stainless steel Dollies can have a handle attached and we can change the castors. We offer different combinations of castors. Our standard issue is to have two fixed castors and two swivel brake castors but, if you prefer all four castors to swivel, that's no problem. Whatever you need to keep the wheels of your business turning.

Plastic Customisation

ALLpaQ plastic Dollies offer the same levels of customisation as the bioprocess containers they were designed to transport. They can also be customised to fit any size or shape of bespoke bioprocess container.

We can also add your logo, an ID number, or any form of identification you need to the tug bracket or body of your bespoke plastic Dolly or Pallet.
